

Discrete mathematics of higher-order networks

Charo del Genio¹

¹Trakia University, Stara Zagora, Bulgaria

Graphs and hypergraphs form the structural backbone of virtually all complex systems. Thus, understanding their structural properties is fundamental, as they affect their dynamics and their functioning, and determine the methods we can use to study them. I will give an overview of some of the main results we have obtained in the area, and of the directions we are now pursuing.
